

Kora 26 Project Proposal — LocoXperts

Purpose: Select LocoXperts as the official Kora 26 cause to build sustainable mountain bike trails, boost local tourism by empowering certified “Local Experts” and guided rides, promote community health through active outdoor mobility, and raise funds for cancer and other fatal diseases.

1) Project Title

LocoXperts: The Community Trail-Building & Local Expert Initiative

2) The Cause (Why cyclists should ride and raise money)

Every cyclist in Nepal knows the thrill of a great trail — and the frustration of trails being lost to road construction or falling into disrepair.

By supporting LocoXperts, Kora riders will raise funds to:

- **Build and restore trails:** Create international-standard, sustainable cycling trails (G-lines and B-lines) that won’t wash away in the monsoon.
- **Boost local tourism & livelihoods:** Certify and empower village cyclists and mountain bikers as “Local Experts” who can lead guided rides for visitors.
- **Promote community health:** Encourage active outdoor mobility and healthier lifestyles through cycling.
- **Raise funds for critical health causes:** Direct fundraising impact toward cancer and other fatal diseases.
- **Protect the ecosystem:** Professional trail-building prevents soil erosion and protects the natural forests we love to ride in.

"Ride the Kora to build the trails you'll ride for the rest of the year."

3) Project Description & Alignment

Alignment: Sustainability, mobility, and community well-being.

LocoXperts is a hybrid digital-physical project. We have already developed a platform that maps local routes:

- <https://www.locoxperts.com/trails>

Kora 26 funds will be used for the **physical labor** of trail construction. We work directly with local communities to identify traditional footpaths and transform them into world-class cycling trails using sustainable, **low-impact manual building techniques**.

4) Impact (Real, on-the-ground results)

If selected as the Kora 26 cause, funds raised will go toward:

- **The "First Kilometer" pilot:** Construction of a flagship, professionally mapped trail section in a high-need area (e.g., Kathmandu Valley outskirts).
- **Local toolkits:** Shovels, pickaxes, and trail-building training for **5 local communities**, enabling year-round trail maintenance.
- **Safety signage:** Professional trail markers to make routes accessible and safe for beginner cyclists and tourists.

5) Simple Fundraising Message

Riders can explain the cause in one sentence:

"I am riding the Kora to raise funds for LocoXperts to build sustainable mountain bike trails and create jobs for local cycling guides in our hills."

This cause is tangible — riders can see, touch, and ride the outcome of their fundraising.

6) Sustainability & Future

LocoXperts is designed as a **self-sustaining ecosystem**, not a one-time project.

- Trails built through Kora 26 will be listed on our platform.
 - Certified “Local Experts” will lead guided rides on these trails.
 - A small percentage of guided-ride fees will return to a **dedicated maintenance fund** for each specific trail, ensuring long-term upkeep and lasting Kora impact.
-

Appendix (Optional details to add)

- Target pilot location and community partners
- Trail design and safety standards (G-lines/B-lines)
- Budget breakdown and timeline
- Monitoring: maintenance plan + impact metrics (km built, local jobs, rider usage)
